

As of October 26th, 2009, Infoblox will introduce a revised version of the Infoblox-250 appliance. The new model is designated as the Infoblox 250-A.

The Infoblox 250-A supports all of the functionality and performance specifications of the existing Infoblox 250. Published performance specifications for the Infoblox 250-A will be the same as for existing Infoblox 250. The Infoblox 250-A can be used interchangeably with existing Infoblox 250 in all Infoblox grids running NIOS version 4.3r5-4 or later. Contact Infoblox for information regarding compatibility of the -A models in grids running an earlier version of NIOS software (see Knowledge Base article 13272).

Infoblox will no longer be accepting orders for the 250 as of October 26th, 2009 as supplies of the current Infoblox 250 are exhausted. Infoblox will begin fulfilling orders for current Infoblox 250s with equivalent Infoblox 250-As instead.

Infoblox will continue to offer maintenance contracts and provide support for the current Infoblox 250 until the End of Support date for the new Infoblox 250-A, i.e., the introduction of the Infoblox 250-A is NOT triggering the End of Support process for the current models. The Infoblox policy is to provide support for standard hardware systems for up to three (3) years from the date the products are discontinued.

For More Information

For release dates and milestones on all currently supported Infoblox NIOS software, please refer to Infoblox Software Release Dates and which is available with other notices regarding Infoblox End of Product Life Cycle on the Web.
