

As of February 19th, 2009, Infoblox will introduce revised versions of the Infoblox-550, 1050, 1550, and 1552 appliance models. The new models are designated as the Infoblox 550-A, 1050-A, 1550-A, and 1552-A, respectively (i.e. "-A" models).

The -A models support all of the functionality and performance specifications of the existing models. Published performance specifications for the -A models will be the same as for existing models. The -A models can be used interchangeably with existing models in all Infoblox grids running NIOS version 4.2r4-0 or later. Contact Infoblox for information regarding compatibility of the -A models in grids running an earlier version of NIOS software (see Knowledge Base article 13272).

Infoblox will continue to accept orders for the current models until March 20th, 2009 or until supplies of the current models are exhausted, whichever occurs first. Unless otherwise requested by the customer, Infoblox may fulfill orders for current models with equivalent -A models.

Infoblox will continue to offer maintenance contracts and provide support for the current (non -A) models until the End of Support date for the new -A models, i.e., the introduction of the -A models is NOT triggering the End of Support process for the current models. The Infoblox policy is to provide support for standard hardware systems for up to three (3) years from the date the products are discontinued.
