Course: Core DDI Data Migration (CDDM) Workshop

Course Description	Build a foundational knowledge of how to perform data and service migrations from Microsoft DNS and DHCP, ISC BIND/DHCPD, and the importing of general IPAM data to Infoblox. Learn through a mixture of theory, discussion and practice with hands-on data migration exercises using common toolsets, applying best practices, and performing troubleshooting.
Target Audience	This is an advanced course for technical team members who want to acquire hands-on data migration knowledge and experience.
Duration	3 days
Style	Lecture, discussion, demo, and hands-on lab exercises
Available Modalities	Instructor-led
Max Class Size	8 attendees
Prerequisites	Attendees must have completed the Core DDI Configuration & Administration (CDCA) course and accreditation. Infoblox recommends, but does not require, that attendees first complete the Core DDI Advanced Troubleshooting (CDAT) course and accreditation and have six months' experience supporting Infoblox Core DDI in a production environment.

Topics	
• Data Analysis • Data Analysis Tools • Service Go-Live Planning • Service Go-Live Execution	• Microsoft DNS and DHCP Data Migration Exercises • ISC BIND and DHCPD Data Migration Exercises • IPAM Data Migration Exercises

Accreditation	Core DDI Data Migration (CDDM) accreditation
Training Credits	30
