

DATASHEET

BloxOne™ Threat Defense Advanced

Strengthen and Optimize Your Security Posture from the Foundation

KEY CAPABILITIES

- Secure existing networks and digital transformations like SD-WAN, IoT and cloud leveraging existing infrastructure
- **Block data exfiltration:** Detect and block DNS-based data exfiltration, DGA, DNSMessenger, and fast-flux attacks using analytics and machine learning
- **Detect and block malware activity:** Block malicious communications to C&Cs, prevent malware from propagating
- **Use web content categorization and web access policy enforcement:** Restrict users from accessing certain categories of web content and review content activity
- **Automate incident response: Reduce time to remediation by two-thirds** and respond to threats faster by first blocking them and then sending event data to rest of ecosystem using public APIs or on-premises integrations
- **Get access to data via S3 Bucket:** Export your activity logs to Amazon S3 buckets and easily use your data in common formats (CSV, JSON and CEF)
- **Accelerate threat investigation and hunting:** Automatically lookup threat data from dozens of sources for faster investigation, making threat analysts **3 times more effective**
- **Enhance visibility:** Get precise visibility and rich network context including IPAM and asset metadata about your network devices for better correlation of events

The Need for Foundational Security at Scale

The traditional security model is obsolete in today's world of digital transformations.

- The perimeter has shifted, and your users directly access cloud-based applications from everywhere.
- SD-WAN drives network transformation and branch offices directly connect to Internet with no ability to replicate full HQ security stack.
- IoT leads to an explosion of devices that do not accept traditional endpoint technologies for protection.
- Most security systems are complex, and do not easily scale to the level needed to protect these dynamic environments.

Moreover, security operations teams are chronically short staffed (there is a **shortage of 2.93 million security operations personnel** worldwide according to a recent ISC2 report), use siloed tools and manual processes to gather information, and must deal with hundreds to thousands of alerts everyday.

What organizations need is a scalable, simple and automated security solution that protects the entire network without the need to deploy or manage additional infrastructure.

Infoblox Provides a Scalable Platform That Maximizes Your Existing Threat Defense Investment

Infoblox BloxOne Threat Defense strengthens and optimizes your security posture from the foundation up. It maximizes brand protection by securing your existing networks as well as digital imperatives like SD-WAN, IoT and the cloud. It powers security orchestration, automation and response (SOAR) solutions using a hybrid architecture for pervasive protection, slashes the time to investigate and remediate cyberthreats, optimizes the performance of the entire security ecosystem and reduces your total cost of enterprise threat defense.

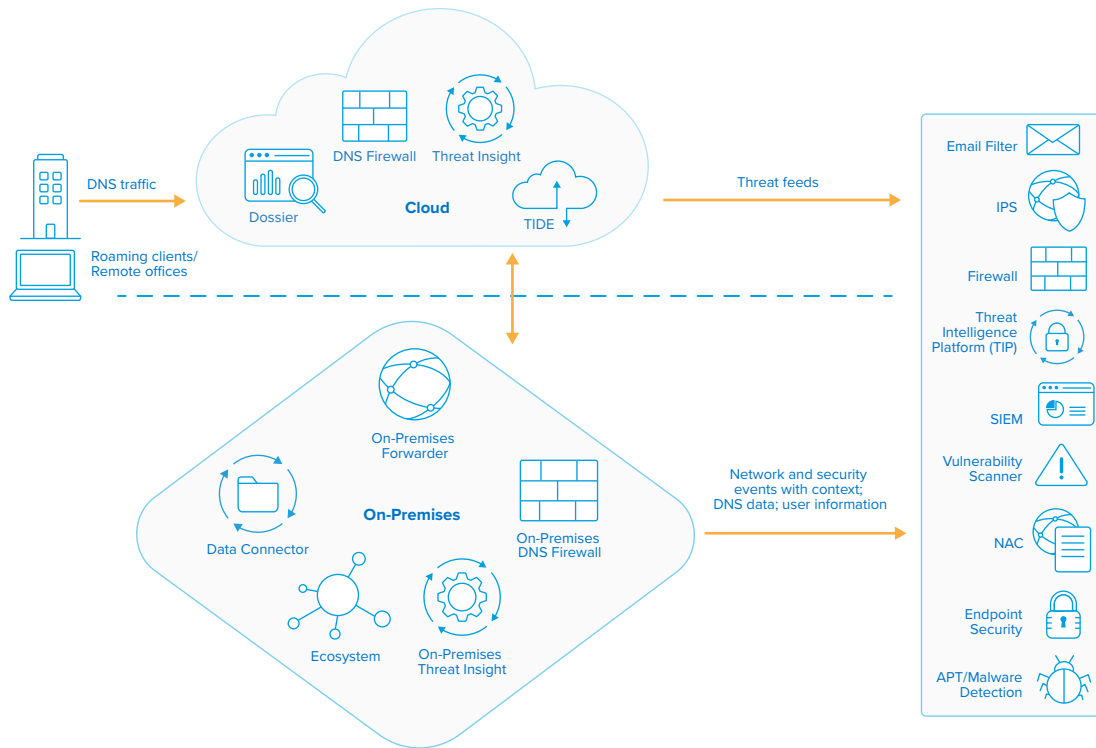

Figure 1: Infoblox hybrid architecture enables protection everywhere and deployment anywhere

Maximize Security Operation Center Efficiency

Reduce Incident Response Time

- Automatically block malicious activity and provide the threat data to the rest of your security ecosystem for investigation, quarantine and remediation
- Optimize your SOAR solution using contextual network and threat intelligence data, and Infoblox ecosystem integrations (a critical enabler of SOAR)-reduce threat response time and OPEX
- Reduce number of alerts to review and the noise from your firewalls

- Reduce cost of threat feeds while improving effectiveness of threat intel across entire security portfolio

Faster Threat Investigation and Hunting

- Makes your threat analysts team **3x more productive** by empowering security analysts with automated threat investigation, insights into related threats and additional research perspectives from expert cyber sources to make quick, accurate decisions on threats.
- Reduce human analytical capital needed

Unify Security Policy with Threat Intel Portability

- Collect and manage curated threat intelligence data from internal and external sources and distribute it to existing security systems

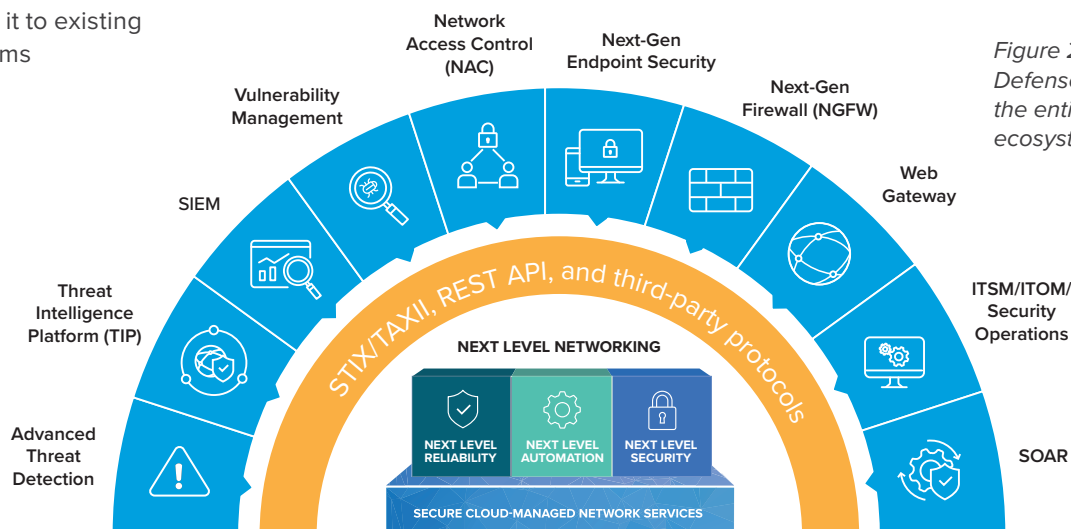

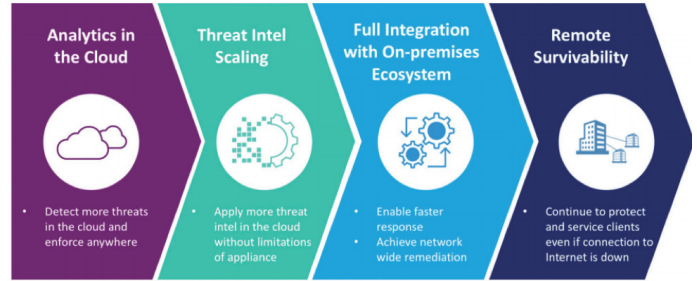

Figure 2: BloxOne Threat Defense integrates with the entire cybersecurity ecosystem

“In this day and age there is way too much ransomware, spyware, and adware coming in over links opened by Internet users. The Infoblox cloud security solution helps block users from redirects that take them to bad sites, keeps machines from becoming infected, and keeps users safer.”

Senior System Administrator and Network Engineer,
City University of Seattle

Hybrid Approach Protects Wherever You are Deployed

Analytics in the Cloud

- Leverage greater processing capabilities of the cloud to detect a wider range of threats, including data exfiltration, domain generation algorithm (DGA), fast flux, fileless malware, Dictionary DGA and more using machine learning based analytics
- Detect threats in the cloud and enforce anywhere to protect HQ, datacenter, remote offices or roaming devices

Threat Intelligence Scaling

- Apply comprehensive intelligence from Infoblox research and third-party providers to enforce policies on-premises or in the cloud, and automatically distribute it to the rest of the security infrastructure
- Apply more threat intelligence in the cloud without huge investments into more security appliances for every site

Powerful integrations with your security ecosystem

- Enables full integration with on-premises Infoblox and third-party security technologies, enabling network-wide remediation and improving ROI of those technologies

Remote survivability/resiliency

- If there is ever a disruption in your Internet connectivity, the on-premises Infoblox can continue to secure the network

THE ROI OF INFOBLOX SECURITY

Offload strained security devices

- Decrease the burden on strained perimeter security devices such as firewalls, IPS, and web proxies by using your already available DNS servers as the first line of defense
- **Up to 60 times reduction in traffic** sent to NGFWs

Improve ROI on existing investments

- Get more value out of adjacent/complementary products by bi-directionally sharing threat and attacker information
- If sending DNS data to SIEM, reduce the cost of SIEM solutions by sending only suspicious DNS data sent to these platforms

Automation

- Reduce cost of human touch/error using automation
- Overcome lack of skilled resources - **60% less demand on your team** to implement and operate, for both skills and cost
- Make your threat analysts **3x more productive** with an easy to use, single console for deep threat intelligence

Infoblox is leading the way to next-level DDI with its Secure Cloud-Managed Network Services. Infoblox brings next-level security, reliability and automation to on-premises, cloud and hybrid networks, setting customers on a path to a single pane of glass for network management. Infoblox is a recognized leader with 50 percent market share comprised of 8,000 customers, including 350 of the Fortune 500.
