The Need for Foundational Security at Scale

Protecting your infrastructure and data is more complicated than it once was. That's because the traditional network security model is inadequate.

- The perimeter has shifted, and your users directly access cloud-based applications from everywhere.
- IoT leads to an explosion in the number of devices that can't be protected using traditional endpoint protection technologies.
- Most security systems are complex, and do not easily scale to the level needed to protect these dynamic environments.

Moreover, security operations teams are chronically short staffed (there is a shortage of 2.93 million security operations personnel worldwide according to a recent ISC2 report), use siloed tools and manual processes to gather information, and must deal with hundreds to thousands of alerts everyday.

What organizations need is a scalable, simple and automated security solution that protects the entire network without the need to deploy or manage additional infrastructure.

Infoblox Provides a Scalable Platform That Maximizes Your Existing Threat Defense Investment

BloxOne Threat Defense Business On-Premises strengthens and optimizes your security posture from the foundation. It maximizes brand protection by securing your existing networks as well as digital imperatives like SD-WAN, IoT and the cloud. It powers security orchestration, automation and response (SOAR) solutions by providing rich network and threat context, slashing the time to investigate and remediate cyberthreats, optimizing the performance of the entire security ecosystem and reducing your total cost of enterprise threat defense.
Maximize Security Operations Center Efficiency

Reduce Incident Response Time

• Automatically block malicious activity and provide the threat data to the rest of your security ecosystem for investigation, quarantine and remediation

• Optimize your SOAR solution using contextual network and threat intelligence data, and Infoblox ecosystem integrations (a critical enabler of SOAR)

• Reduce time to remediation by two-thirds

• Use curated threat intelligence and block bad stuff before it even gets to perimeter defenses to reduce the noise from firewalls and the number of alerts teams must review

• Reduce total expense of threat defense by making all components more productive and efficient

Unify Security Policy with Threat Intel Portability

• Collect and manage curated threat intelligence data from internal and external sources and distribute it to existing security systems

• Reduce cost of threat feeds while improving effectiveness of threat intel across entire security portfolio

Accelerate Threat Investigation and Hunting

• Make your threat analysts team 3x more productive by empowering security analysts with automated threat investigation, insights into related threats and additional research perspectives from expert cyber sources to make faster, more accurate decisions on threats.

• Reduce human capital required for threat analytics

Infoblox is leading the way to next-level DDI with its Secure Cloud-Managed Network Services. Infoblox brings next-level security, reliability and automation to on-premises, cloud and hybrid networks, setting customers on a path to a single pane of glass for network management. Infoblox is a recognized leader with 50 percent market share comprised of 8,000 customers, including 350 of the Fortune 500.
