JOINT SOLUTION BRIEF

Fortinet and Infoblox Security Solution

Broad, integrated and automated solution for increased visibility, information sharing and enhanced security posture

Challenges

Today’s enterprise network consists of many network and security devices that each generate their own incidents but don’t always share the information with each other. This lack of interoperability and integration creates silos between network and security teams. In a 2017 ESG report, keeping up with an increasing volume of security alerts and a lack of integration between security tools are two of the biggest challenges that security operations teams face.1 In response, organizations are investing heavily in automation and orchestration of incident response to improve collaboration between IT and cybersecurity teams, keep up with an increasing volume of security alerts, prioritize alerts and shorten incident response times.

The FortiGate NGFW and Infoblox Ecosystem Exchange Joint Solution

The Fortinet and Infoblox integrated solution enhances collaboration and breaks down silos by leveraging the Fortinet Security Fabric. Designed around a series of open APIs, Open Authentication Technology and standardized telemetry data,
Infoblox manages addresses and address groups on FortiGate’s next-generation firewall (NGFW) with a list of devices connected or compromised—for example, devices associated with identified malicious DNS requests or DNS data exfiltration—allowing customers to block communications with specific resources.

The integration with Fortinet provides an advantage over the more standard approach of static security policies that are configured to grant access for whole networks, regardless of whether IP addresses and their ranges get used or not.

Key Components

Infoblox Ecosystem Exchange

Infoblox Ecosystem Exchange is a highly interconnected set of ecosystem integrations that extend security, increase agility and provide situational awareness for more efficient operations, both on-premises and in the cloud. Infoblox Ecosystem Exchange provides visibility across the entire network, including virtual or cloud deployments, removes silos between network and security teams, improves agility, automates IT workflows, enables faster threat remediation and network changes and provides a better ROI for existing IT and security investments.

FortiGate—Next-Generation Firewall

The Fortinet Enterprise Firewall Solution offers universal platform support for all types of deployments, giving security professionals maximum latitude across the extended enterprise network. Security managers have the visibility and control they need to counter attackers with one network security operating system across the entire FortiGate family of appliances. And all the FortiGate appliances are interconnected with the Fortinet Security Fabric for automatic distribution of contextual security policy and threat intelligence throughout the enterprise. Using a single-pane-of-glass dashboard, security managers can consolidate their management views and implement security policies concisely.
